

Your next move?

Talk to your healthcare professional about adult invasive pneumococcal disease and find out if CAPVAXIVE® is right for you

Bring this discussion guide to your next doctor's appointment or pharmacy visit to help start the conversation about invasive pneumococcal disease and CAPVAXIVE®. Invasive pneumococcal disease is a serious disease that can cause severe illness and may lead to long-term effects, hospitalization and even death.

While CAPVAXIVE® will not protect against complications such as hospitalization or death, it can help protect those at risk against invasive pneumococcal disease.

Everything you might want to ask your healthcare professional

What puts me at risk for invasive pneumococcal disease?

Does my risk increase with age?

Do lifestyle factors like smoking or drinking affect my risk?

How do chronic conditions like kidney disease, heart disease, lung disease, or diabetes affect my risk?

How do I help protect myself?

- How could I get invasive pneumococcal disease?
- How is it different from a cold or flu?
- Should I get vaccinated if I'm active and healthy?
- Is CAPVAXIVE® right for me?
- Can I get CAPVAXIVE® any time of the year?
- Do I need to get CAPVAXIVE® every year?

Questions for my healthcare professional

CAPVAXIVE® may not protect everyone who gets vaccinated. Side effects and allergic reactions can occur.
